

POOLS AND WELLNESS

We fulfil your spa dreams. We are passionate about the design, planning, execution and maintenance of high-quality swimming pools and spa facilities. You receive design, architecture and technology from one source. Our range extends to the development of turn-key spa facilities.

We create aesthetic rooms for wellness, perfect detail solutions and high-quality materials into harmony with modern technology.

Of course we also use sustainable and energy-efficient construction to implement your design. We bring together solutions from many individual components which will please you for years.

Let us inspire you and support all your spa desires. Let us know what we can do for you.

INDOOR POOLS – THE SHOWPLACE

A pool in the house is available year-round. An indoor pool can become your recreational focus. This combines activity and relaxation in one place.

The pool is the centre of your wellness oasis. It can be equipped with many water attractions. Neck jets, wild springs, air and water jets give you a soothing, relaxing experience. A counter-current system provides swimming power. Waterfalls and underwater lights produce a unique atmosphere.

Your indoor pool can be built into a wellness facility with sauna, steam bath, experience shower, quiet area, whirlpool, fitness room and many other attractions. All components are joined together by us into a holistic design. Fulfilling your desires and imagination are our focus. We can build your personal spa oasis for your well-being, every day.

WELCOME TO MLZ'S WORLD

COMBINATION OF ARCHITECTURE AND TECHNOLOGY

ARCHITECTURE AND TECHNOLOGY

Building a contemporary spa facility requires the perfect symbiosis of architecture and technology. Our architectural department plans and implements demanding designs to the last detail. Our technology specialists provide a total technical design which meets your demands for comfort, luxury and energy efficiency. We will develop sustainable holistic solutions together. All from one source.

ENERGY AND SUSTAINABILITY

We find the right technology for your perfect spa oasis. Heating, cooling and water technology are seamlessly combined. Proper technology provides a comfortable atmosphere for well-being. We provide a perfectly-tailored technical design. Efficient and sustainable energy production and storage make you independent of the energy market. We provide your independent energy supply.

INDOOR POOL AND SPA

Relax in your own wellness spa. The wellness spa can cover other areas in addition to the swimming pool. A sauna, steam bath, shower, whirlpool, solarium and many additional items can be a part of your spa. Complete your wellness spa with a personal fitness area or an entertainment zone.

ENERGY TECHNOLOGY

Energy technology provides the energy for your operation. Heating and systems in a swimming pool require a good deal of energy. The entire system can be designed on the basis of regenerative, contemporary energy producers. Self-produced power and heat provides independence from energy utilities. A holistic design provides for ecological and economical sustainability of your spa facility.

OUTDOOR POOL

An outdoor pool offers a welcome, cool oasis on hot summer days. An attraction in your garden. Outside pools offer space for sports, games and relaxation. Covers protect your pool from contamination, and save energy. A mobile roof extends the pool season, so that you can also enjoy your outside pool on cloudy days.

HEATING, VENTILATION AND AIR CONDITIONING

Fresh air, the right humidity and a comfortable temperature are essential to your well-being. Contemporary equipment fulfils the special requirements of an indoor pool and creates a cosy atmosphere. Component surfaces, air and water are comfortably controlled so that your stay in your indoor pool is a pleasure.

WATER EQUIPMENT

Water systems provide healthy and clean water. On one hand, solid and floating material is mechanically filtered; on the other hand, chemical water quality is continuously monitored and regulated. Modern equipment produces hygienic, pure water – without a chlorine smell. Many processes run completely automatically. Powerful pumps produce water circulation and provide a water attraction. An advanced control system is very easy to operate and reports if intervention is needed.

CONSULTATION, PLANNING AND SERVICE

It all starts with a thorough consulting session. We detail your desires and wishes and show ideas and solutions for your project. Starting with the right consulting leads to the right solution.

Our professional planners develop holistic solutions for a perfect interplay of design and equipment. Our team can support architects or work out individual swimming pool designs. Thoroughly thought-out planning makes implementation smooth and results in perfect

results to fulfil your needs and accommodate your personal style. Our team draws on a wealth of experience and is always bang up-to-date. We follow the latest trends, develop solutions and have a large repertoire of tried-and-tested standards at our disposal. You can rely on us and our knowledge.

We work with you step by step to completion. If you wish, our service team can also provide regular service of your system.

PERFECTLY THOUGHT-OUT TO THE LAST DETAIL

OUTDOOR POOLS – LIGHT, AIR AND FREEDOM

A pool in your own garden offers space for sports, play and relaxation. Swim under the open skies.

Enjoy a welcome cool swim on hot summer days. An open swimming pool is an attraction in your garden. It offers a broad range of opportunities. Let us show you how you can integrate a pool as a design element in your garden.
